ROSENBURG SELF-ESTEEM SCALE
To create the scale, a value is assigned to each of the 10 items.

*Resulting in a scale with a range from 0-30, with high scores indicative of high self-
esteem. Most people score 15-25;anything below 15 is indicative of low self-esteem.
Five of the 10 items were reversed: B27C, E, H, J, K resulting in being scored as
Strongly Agree=0, Agree=1, Disagree=2, Strongly Disagree=3.
The other items B27A, B, D, F, G were scored as
Strongly Agree=3, Agree=2, Disagree=1, Strongly Disagree=0.*

TA192155   "MENTAL HEALTH: NON-SPEC PSYCH DISTRESS"   NUM(2.0)
The K-6 Non-Specific Psychological Distress Scale

This scale is constructed using non-missing responses to the following questions:

> *TA191961 H83a. How Often Felt Nervous in Past Month*
> *TA191962 H83b. How Often Felt Hopeless in Past Month*
> *TA191963 H83c. How Often Felt Restless in Past Month*
> *TA191964 H83d. How Often Felt Everything an Effort in Past Month*
> *TA191965 H83e. How Often Felt Too Sad in Past Month*
> *TA191966 H83f. How Often Felt Worthless in Past Month*

The codes for these questions are as follows:
  1 All of the time
  2 Most of the time
  3 Some of the time
  4 A little of the time
  5 None of the time

To create the scale, the items are rescored as follows:
A response of
   'All of the Time' = 4 points,
   'Most of the Time' = 3 points,
   'Some of the Time' = 2 points,
   'A Little of the Time' = 1 point, and
   'None of the Time' = 0 points.

The scores are then summed; a score of 13 or higher indicates sensitivity around the threshold for the clinically significant range of the distribution of nonspecific distress.

This variable may be based on fewer than the above six variables. Items containing "don't know" and "refused" responses are not included in the calculation of the scale.

This scale was developed by Dr. Ronald Kessler, Professor of Healthcare Policy at Harvard Medical School.

TA192188   "BODY MASS INDEX"   NUM(4.1)
Body Mass Index

This variable was calculated as follows:

   BMI =[(Weight in Pounds) / (Height in inches) x (Height in inches)] x 703

Height and weight values were taken from the following questions:

         TA191949 H77. Weight--Total Pounds
         TA191951 H78. Height--Feet Component
         TA191952 H78. Height--Inches Component

Any extreme results, i.e., BMI of less than 15.0 or greater than 59.9, were recoded to 99, since in such cases the accuracy of height and/or weight values is highly doubtful.

Body mass index (BMI) is a measure of body fat based on height and weight that applies to both adult men and women. BMI categories are:

   Normal weight = 18.5-24.9
   Overweight = 25.0-29.9
   Obese = BMI of 30.0 or greater

For more information, see:

TA192198   "URBANICITY"   NUM(2.0)
Beale-Ross Rural-Urban Continuum Code for Residence at the Time of the TA Interview

This variable is suppressed (filled with zeroes) in the public release file to protect the anonymity of respondents. The data are available in a separate file to qualified users under special contractual arrangements with the PSID; for more information, contact us at PSIDhelp@umich.edu.

These codes are based on matches to the FIPS state and county codes against the 2013 Rural-Urban Continuum Codes published by USDA downloaded from https://www.ers.usda.gov/data-products/rural-urban-continuum-codes/.aspx

The 2013 Rural-Urban Continuum Codes form a classification scheme that distinguishes metropolitan counties by the population size of their metro area, and nonmetropolitan counties by degree of urbanization and adjacency to a metro area. The official Office of Management and Budget (OMB) metro and nonmetro categories have been subdivided into three metro and six nonmetro categories. Each county in the U.S. is assigned one of the 9 codes. This scheme allows researchers to break county data into finer residential groups, beyond metro and nonmetro, particularly for the analysis of trends in nonmetro areas that are related to population density and metro influence. The Rural-Urban Continuum Codes were originally developed in 1974. They have been updated each decennial since (1983, 1993, 2003, 2013), and slightly revised in 1988. Note that the 2013 Rural-Urban Continuum Codes are not directly comparable with the codes prior to 2000 because of the new methodology used in developing the 2000 metropolitan areas.
