## Preface

This volume documents the fifteenth wave of data collected in the Panel Study of Income Dynamics, interviews taken in 1982 on income for 1981. Volumes I and II of A Panel Study of Income Dynamics contain tape codes, indexes, available data, questionnaires and procedures specific to our first five years of data collection (1968-1972). These volumes also describe the early history of the study and some of the basic procedures that are common to all fifteen years of interviewing. Ten supplemental volumes, including this one, cover procedures, codes and questionnaires for Waves VI-XV. Ten volumes of findings entitled Five Thousand American Families--Patterns of Economic Progress are now available. Due to lack of funding, no further volumes are planned in this series.

### Board of Overseers

The panel study now has a Board of Overseers. Most of its ten members come from other Universities: California, Chicago, Cornell, Harvard, Wisconsin and Yale and one member from the Department of Labor.

The Board has met four times and its members have many suggestions for improving the study. Among the first to be achieved is a PSID User Guide, available by early 1984. It contains much vital information that a researcher needs to know in order to use the panel study data effectively. It is in loose-leaf format so that new material can be added as needed. The guide describes how to use the data properly for either cross sectional or longitudinal analysis with either the family or the individual as the unit of analysis. See Section I, Part 8 of this volume for a list of some other topics included in the guide.

### Staff

Greg J. Duncan and James N. Morgan are the study's principal researchers. Others responsible include Sue Augustyniak, Joan Brinser, Barbara Browne, C. Gaye Burpee, Mary Corcoran, Anita Ernst, Peggy Gunnesch, Priscilla Hildebrandt, Dan H. Hill, Martha S. Hill, Margaret Hoad, Tecla C. Loup, Linda Muszalski, Lenore Pienta, Michael Ponza, Anne Sears, and Mary Wreford. To our regret, Linda Datcher has left us to become a Post-Doctoral Fellow at the John F. Kennedy School of Government at Harvard and Michael Kaplan is pursuing bright lights, fame, and fortune in the Big Apple.

SECTION I  
PROCEDURES FOR THE 1982 INTERVIEWING YEAR

Part 1: The 1982 Questionnaire, Data Processing, Interviewing  
Procedures, Occupation Codes, Data Quality,  
Independent Part Samples, Weights

The 1982 Questionnaire

As an economy measure the content of the 1982 Questionnaire was reduced. No new questions were asked and even some of the trend questions about things that don't change often were eliminated temporarily. However, we did retain the series of questions initiated in 1981 about spells of unemployment and periods neither working nor looking for work.

Data Processing

The direct data entry coding that we started using last year continues to save us time and money. This system decreases staff time spent checking wild codes and consistency and also can be used to generate some variables.

Interviewing Procedures

Most of the interviews were taken by telephone by interviewers in the field. The Ann Arbor interviewers concentrated on call-backs for missing information. They also made numerous follow-up calls to reluctant respondents who had received persuasion letters (we were able to interview 60 percent of the original refusals).

We took 6742 interviews out of an estimated 6919 for an overall response rate of 97.4. Subtracting from the base the 55 respondents who had died since the last interview, had moved into institutions where we were not able to interview them, were too ill to talk to us, or had gone back to being the wife in a reunited couple, raises the response rate to 98.0 percent. This includes interviews with 257 new splitoffs out of a possible 299 for an 86.0 percent response. For the reinterview panel only (again with the deceased, etc., subtracted from the base) the response rate was 98.8 percent.

The average length of the 1982 interview was 20.8 minutes. We paid \$10.00 for it plus the usual \$5.00 for returning the address correction post card.

As of 1982 we have respondents in the District of Columbia and all the states except Vermont ranging from one lone family in Montana to 630 in California. Panel families also live in Puerto Rico and 14 foreign countries.

### Occupation Codes

We use the 1970 Census three-digit occupation and industry codes for the main jobs of employed heads and wives. They are also used for the most recent jobs held by heads and wives who are currently unemployed and looking for work and for any job held in 1981 by a head or wife who is now retired or no longer in the labor force. We continue to use the Survey Research Center's two-digit occupation codes, which are brackets of the 1970 Census codes, for extra jobs held by a head or wife and for the kind of job they were hunting for if they were unemployed and looking for work. For comparability to past data, one-digit occupation codes are used to code head's first job and head's father's occupation, since these data items are collected only for families with new heads.

### Data Quality

Ninety-three percent of the 1981 interviews were taken by telephone (Table 2). The remaining 10 percent of respondents have no telephones, or prefer personal interviews due to party lines or hearing difficulties, or live out of range of our interviewers and fill out their own questionnaires. Every year a few more wives answer the questions for their husbands (Table 3). However, there is very little year-to-year variation in the number of assignments we have to make (Table 4), so the quality of the data, according to our measure of it, continues to be good. The overall response rate remained at 97 percent (Table 1). If the cumulative response rate is based on the interviews actually obtained in 1968 and the splitoffs from those families, the cumulative response rate after the fifteenth year is 60.4 percent.

As of 1982, 11,113 members of the original 1968 panel families were still in the sample. Of these, 326 were currently in institutions (away at school or college, in the armed forces, in hospitals, nursing homes, jails, etc.). 4,586 children born to panel families since 1968 still live in these families. There are also 3,799 non sample individuals living in panel families.

\*Table 4 is based on four variables:

Accuracy of Head's Labor Income (V8266 + V8271)

Accuracy of Wife's Labor income (V8274)

Accuracy of Asset Income of Head and Wife (V8282)

Accuracy here is determined by the number of assignments made by the editors in order to recreate data missing from an interview. The more assignments, the less reliable the data. The accuracy code values and their meanings are:

0. Adequate response: No assignments made.
1. Minor assignment: Response was inadequate, but estimates could be made within a probable error of under \$300 or 10 percent of the assignment by using previous years' data or other data in the interview.
2. Major assignment: Response was inadequate, and estimates had a probable error of at least \$300 and at least 10 percent of the value of the assignment, using any information available in previous interviews or in the current one. Usually these values were assigned from an assignment table.

This table shows the sum of the accuracy codes for the three different income measures. The maximum number possible here would be eight for married couples, six for single heads.

### Independent Part Samples

The use of part samples is suggested for separating the selection of a preferred model from the assessment of its stability and power. Simple random subsamples are not independent of the rest of the sample because of the clustered nature of area probability samples. Therefore, four independent quarter-samples are designated in the code (V8724). How much of the sample should be reserved for statistical testing depends on how unsure one is about the best model and how important the estimation and testing of one optimal model is felt to be. For illustrations of the results of this separation of the searching from the assessing procedures, see the volumes of findings, Five Thousand American Families--Patterns of Economic Progress, Volume 1, pp. 6-8 and pp. 342-344; Volume II, Chapter 9; and Volume IV, Chapter 2 (Survey Research Center, Ann Arbor, Michigan). There is also a code for use in defining paired strata for repeated replication of half-samples for computing sampling errors (V8725). See Chapter 17 of Vol. IX of Five Thousand American Families, and Section I, Part 5 in this volume.

### Weights

The sample was reweighted in 1978. For a detailed description of how this was done, see A Panel Study of Income Dynamics--1978 Interviewing Year, Wave XI, page 6. This is a population weight for reducing bias in estimates, not a variance weight for efficiency.

### Part 2: 1982 Questionnaire

Following is a copy of the 1982 questionnaire with variable numbers from the cross-year family-level tape added at the appropriate locations. Where so indicated in the questionnaire, certain data items have been transferred to edited worksheets. See part 3 of this section for copies of the worksheets and their data contents. The origins of individual-level data items that are coded from the interview are also flagged.

### Part 3: Editing Procedures and Worksheets

The editing process serves three main purposes: (1) accounting for all year-to-year changes in family membership, (2) rectifying discrepancies within the interview before coding, and (3) calculating and recording numeric data on the worksheets and interviews for coding. It is a complicated task requiring a high degree of accuracy, so each interview is checked by another editor.

Each interview is screened for discrepancies that require a return trip to the field for further information. Family composition editing and occupation coding comprise the next step. Finally, the massive edit is done, and interviews are considered "clean" for coding.

The full array of past interviews is available to editors, though only the past year's interview is usually consulted to solve problems. It is used when the current interview is vague, contradictory, or incomplete despite previous attempts to clarify the family's situation. Project staff closely oversee the editing process, and substantive decisions regarding the handling of specific problems are made by this staff.

The techniques used to edit previous waves were again used to edit Wave XV. Detailed discussion of these techniques will be found in the Waves I-V (1968-1972) documentation, Volume 1, pp. 270-339. Specific changes since that time have been documented annually in Section I, Part 3 of the succeeding documentation volumes.

#### Family Composition Editing

All people in a panel family at the time of the previous year's interview must be accounted for in the current year. They may either remain in the family or they may have moved out to form a new family. Sample members 18 or older who move out and form their own households are followed and interviewed as new panel families. Family composition editing remains unchanged for 1982.

#### Wave XV Changes

In an attempt to economize, a move was initiated to streamline the questionnaire. The entire staff prioritized the 1981 questionnaire and removed a significant number of questions for the 1982 wave. A comparison of the 1982 questionnaire (see Section 1, Part 2 of this volume) with the 1981 questionnaire in the Wave XIV (1981) documentation, Section 1, Part 2, will most easily allow the user to see what has been deleted. Many of the dropped questions will be returning in the 1983 questionnaire.

Below is a summary of question topics not carried over from the 1981 wave to the 1982 questionnaire.

1. Availability of Public Transportation
2. Distance of Household from Center of Nearest City
3. Type of Housing Unit Lived in
4. Mortgage Information for Home Owners
5. Separate Utilities Costs (however, cost of total utilities was asked)
6. Travel to Work: Time Spent and Type of Transportation (miles to work was asked)
7. Amount of Housework Done by Family Members
8. Perceived Eligibility for Food Stamps
9. Weeks Unemployed and Weeks in School During the Previous Year for Other Family Unit Members (those who are not currently Heads or Wives)
10. Lengths of Hospital Stays and Bed-confining Illnesses for Head and Wife
11. Whether the Family Received Financial Assistance from Government Medical Service (Medicaid, Medicare, etc.)

#### SALARIED WORKERS' WAGE RATES

We are continuing to use "real work hours" to convert salaried workers<sup>1</sup> current income into hourly wage rates. This was described in the Wave XIV (1981) documentation, p. 66, and below are the current instructions given to the editors:

In order for you NOT to use one of our conventions for converting a yearly/monthly/weekly salary, the following conditions must ALL be met.<sup>1</sup>

1. Head/Wife must not receive overtime pay.
2. Head/Wife must have had their present position for over a year.
3. Head/Wife must work significantly more than our conventional figure (i.e., at least 45 hours per week).

These rules also apply for those working significantly less than 40 hours per week (i.e., less than 35 hours per week) with one difference, it does not matter if they receive any overtime payment.

---

<sup>1</sup>The conventions are as follows: yearly=2000 hours; monthly=167 hours; and weekly=40 hours.

## MARGINAL TAX RATE

For the past few years, our tax estimations and "Marginal Tax Rate" have been calculated using a computer program (see Wave XIII (1980) documentation volume, Section 1, Part 5 for a detailed description). Of the almost 7000 panel interviews, between 20 and 30 require hand tax calculation. This occurs when a New Head or New Wife moves into a panel family after December 31st of the previous year but by the time of the current year's interview.

This means that a currently married couple (or family) functioned as two separate family units in the previous year. Since our tax program cannot accommodate this situation, we calculate separate taxes by hand for each and place the sum in the variable for Total Family Taxes (V8676). In the variable for Marginal Tax Rate (V8677) we place whichever of the two tax rates is higher.

## ASSIGNMENT TABLES

In Wave XV, as in Waves XII-XIV, we used inflation factors for some of our assignment tables. The tables were first drawn using the unweighted data from last year (Wave XIV); then each figure was increased by the percent of inflation for that category. The inflation factors were derived from the Implicit Price Deflators for gross national product of the Commerce Department's Survey of Current Business, January 1982, by comparing the 4th quarter of 1980 to the 4th quarter of 1981. The factors used are as follows:

House Value for Homeowners (V8217) 106%  
(Note that if we have a house value for this dwelling from last year's interview we use that amount, plus 10%, with an accuracy code value of 1 in preference to the table amount, which always carries an accuracy code value of 2.)

Annual Rent for Renters (V8221), 108.5%

Imputed Annual Rent for Nonowners/Nonrenters (V8223), 108.5%

Total Utilities (V8225), 114.1%

Annual Food Cost Except Food Stamps (V8256), 105.4%

Annual Cost of Eating Out (V8258), 105.4%

## Part 4: Coding Procedures

Production coding the questionnaire is the final step to putting the data into usable form for analysis. This occurs after the questionnaire has been edited as described in Part 3 above. The coding process converts non-numerical answers into numerical values.

The coders entered the edited variables and coded the questionnaire using the system designed by the Computer Support Group at ISR's Survey Research Center for direct data entry. The system, Interactive System for Input of Survey Data (ISISD), is compatible with ISR's OSIRIS analysis package and has been used by the PSID for three years. It incorporates wild code and consistency checking of data during the actual coding process. These checks insure that coders cannot enter invalid code values, and the necessity of later data cleaning by the Panel Study staff is greatly reduced.

This section deals only with the question of reliability, or intercoder variance. Reliability is the measure of ambiguity of codes as well as accuracy of the coders. Approximately 10 percent of the interviews (682) were coded twice, once by the coder and a second time by a Panel Study staff member or a check coder. Check coding consists of an item-by-item check of all data values which have been independently coded by a second person, thus enabling the study staff to determine early in the processing whether any individual coder is having difficulty and whether any codes are causing problems.

Coders are trained by a member of the study staff before they are allowed to production-code interviews. Training begins with a short introduction on the history and purpose of the study and a question-and-answer session. The coders check code two practice interviews which have been coded previously by the study staff member. Then the coders and the study staff member go over the practice interviews in detail, discussing any differences with particular emphasis on problems that could arise during in production coding and responses that may present coding difficulty.

A difference is a disagreement between the coder and the check coder. Differences become errors when so judged by the check coder; for example, a coder may use the wrong code, punch the wrong number on the terminal keyboard, or miss a specific direction in the code. Those disagreements which are not errors involve coding of open-ended questions; decisions on the final codes chosen rest with the study staff member.

Coding Differences for Wave XV

All but one of the differences of 1.3 percent or over were on open-ended questions. Such questions vary in the degree of coding difficulty, depending on question content. Questions ascertaining reasons for various behavior, that is to say, "Why?" questions, are the most difficult ones to build codes for and to actually code.

Questions B18 (V8370) "Why did you move?" and B21 (V8373) "Why might you move?" have periodically shown some history of reliability problems throughout the duration of the study. Replies involving consumptive reasons are most usually so specific to each respondent's situation that new coders' ability to conceptualize these replies in terms of the given code categories is very difficult.

Question C20 (V8391) "What happened to the job you had before--did the company go out of business, were you laid off, promoted, were you not working, or what?" has problems similar to questions B18 and B21. Although C20 is more specific in content than B18 and B21, it is still asking "why" something occurred. Respondent replies here were not always sufficiently unambiguous for ease in coding. For example, the answer "transfer" could be interpreted as either a lateral transfer or a promotion or demotion. The code was changed early in the coding process to include unspecified transfers in code 7.

Table 5  
RELIABILITY SCORES

Differences 1.3 Percent or Over		
Question Number	Variable Number	Percent Error
A4*	V8359	1.7
B18	V8370	3.9
B21	V8373	3.3
C20	V8391	1.3

Overall coding rates of difference for 1982 are .84.

\*Since question A4 (V8359) asks for factual information, the 1.7 rate of difference may be taken as the error rate for that variable.

When coding question A4 (V8359) "During the last year, about how many miles did you (and your family) drive in your [car(s) (and) truck(s)]?", some coders neglected to code the reply as "99999. NA (not ascertained)" when one or more of the vehicles were deleted from the previous question because they were owned by nonFU members who shared the household with the panel family. This deletion

76 -

procedure necessitates such a change because in most cases the replies are not broken down into miles for each vehicle; only the annual total on all vehicles is given.

#### Check Coding of Occupation and Industry Codes

During the coding process, a separate checking procedure was established to attempt to obtain some information on reliability rates for the three-digit 1970 Census occupation and industry codes. A total of 620 interviews were selected for this process. Since each Head must answer either Section C or D or E, the check coder used the occupation and industry information from the appropriate section for overall totals. A similar procedure was followed for Wives, using Sections F, G and H. Of the 620 interviews selected, 483 contained information for Heads and 229 for Wives. The remainder represent families with non-working Heads or Wives or with no Wife in 1982.

Overall reliabilities (including the inapplicable cases) were:

Head's Occupation: 92.4%  
Head's Industry: 95.5%  
Wife's Occupation: 97.6%  
Wife's Industry: 98.5%

When adjusted for removal of inapplicable cases, these figures became:

Head's Occupation: 89.6%  
Head's Industry: 93.2%  
Wife's Occupation: 93.5%  
Wife's Industry: 96.1%

Matched differences, that is, cases in which the coder and check coder differed in the same way more than once, occurred between the following codes:

	<u>Occupation*</u>	<u>Number of Differences</u>
Head		
	Managers & Administrators, nec (245) - Restaurant, cafeteria, and bar manager (230)	3
	Managers & Administrators, nec (245) - Foremen, nec (441)	2
	Heavy equipment mechanics, including diesel (481) - Mechanics and repairmen, not specified (495)	2
	Cleaners & Charwomen (902) - Janitors & sextons (903)	2

<u>Heads</u>	<u>Industry*</u>	<u>Number of Differences</u>
Manufacturing of pottery and related products (137) - manufacturing of electrical household appliances (199)		2
Sanitary services (478) - local public administration (937)		2

Occupation and industry codes yielding the highest numbers of differences were:

<u>Head</u>	<u>Occupation</u>	<u>Number of Differences</u>
Managers and Administrators, nec (245)		14
Heavy equipment operatives (481)		4
Restaurant, cafeteria, and bar managers (230)		3
Miscellaneous operatives (694)		3
Wife		
Child care workers, exc. private household		2

<u>Head</u>	<u>Industry</u>	<u>Number of Differences</u>
Industry not reported, NA (999)		5
Special trade contractors (069)		3
Pulp, paper, and paperboard mills (328)		3
Health services, nec (848)		3
Manufacturing of pottery and related products (137)		2
Manufacturing of electrical household appliances (199)		2
Automobile repair and related services (757)		2
Federal public administration (917)		2
Local public administration (937)		2
Wives		
Apparel and accessories (319)		2

---

\*There were no matched differences on occupation or industry for the wives.

For both Heads and Wives, only 8% of the differences on both occupation and industry occurred within the same Census Major Heading groups.

Heads' occupation differences were predominantly within the Managers and Administrators group, the Craftsmen and Kindred Workers group, and the Service Workers (including Private Household). Wives' occupation problems were mainly confined to the Clerical and Kindred Workers, since Wives tend to be concentrated in that occupation group.

Industry code differences for Heads were most frequent in the Manufacturing group, the Construction group, and the Utilities and Sanitary Services group. Wives' differences in industry codes were spread fairly evenly among the different groups.

Appendix 2 of the Wave XIV (1980) documentation volume lists the three-digit occupation and industry classifications used. These are taken from U.S. Bureau of the Census, 1970 Census of Population Alphabetical Index of Industries and Occupations, U.S. Government Printing Office, Washington, DC, 1971, pp. vii-xiv.

Prior to 1981, an attempt was made to reconcile inconsistencies in the coding of the same occupation between years. Cases with the same Head for each pair of years and in which this Head had reported no change in job were inspected for clues as to which occupation code was correct. This task proved to be both monumental and relatively fruitless, and was discontinued.

#### Part 5: Generated Variables and Additional Data

Various indexes, bracket variables, and complex measures of economic status have been constructed each year using variables derived directly from coded interview data. Each year changes in the interview schedule have made additions and deletions of indexes necessary. In general, if an index could not be built to be exactly comparable to a previous index, no index was constructed.

##### Income

Several measures of economic status have been generated for all fifteen years, including money income variables and measures of income adequacy. Family Money Income, one of the simplest indexes, is the total of all members' earnings, transfers, and capital income (1982: V8689).

##### Bracket Variables

Several numerical variables, such as family money income, had been, until Wave X (1977), given also as bracket (interval) codes. Such interval codes had

been constructed for most of the measures where a distribution was useful and appropriate. This includes practically all of the income variables and their components. For Waves X-XV we have provided two pieces of information in the family tape code which allow users to bracket as their own uses dictate: (1) weighted percent of nonzero cases, and (2) weighted mean value of those cases. This information is provided for any variable which was bracketed in 1976.

### Race

Because the interview schedules are now designed for telephone use, race of respondent, which comes from interviewer observation, has not been obtained since the 1972 interviewing year. Families were therefore assigned race codes from the 1972 data. For splitoffs, race was assigned from the 1972 values for their main families (V8723).

### Regional Data Measures

In addition to personality and behavior, locational and environmental factors are potentially important determinants of an individual's economic status. Consequently, the interview data have been supplemented with information on some employment and income characteristics of the county where the panel family lives (V's 8728-8730). Questionnaires are sent each year to state employment offices asking about current labor market conditions in these counties. For the past three years, two of the usual five questions asked in previous years were dropped as being inappropriate in the modern world.

### Sampling Error Computing Unit (SECU)

Formulas for the sampling errors, or variances, of estimators based on the assumption of having data from a simple random sample are inappropriate for the PSID data. While the PSID is a probability sample, it differs from a simple random sample because of stratification, clustering, and disproportionate selection rates for families. These deviations from simple random sampling complicate proper calculation of sampling errors for estimators, but they do not entirely preclude it.

Methods for calculating the proper sampling errors of estimators do vary, though, according to the type of estimator, the calculation model, and the computer program performing the calculations. Since the PSID is often used for regression analysis, a SECU variable was generated which was specifically designed to allow users to calculate the proper sampling errors for regression statistics in an attempt to reduce computing costs without huge sacrifices in precision.

The code for the SECU variable, its name, and the terminology that follows specifically relate to an OSIRIS IV sampling error computer program with the BHS option for regression statistics. This program, Repeated Replication Sampling Error Analysis (REPERR), has other options for sampling error calculations for regression statistics, and is one of the two OSIRIS IV sampling error programs. The other program, Sampling Error Analysis (PSALMS), is designed to calculate the sampling errors of ratios such as means or proportions. However, a coding of computing units different from that of V8725 is recommended for such calculations. Researchers interested in computing sampling errors of ratios should inquire about obtaining this alternate coding consisting of a considerably larger number of coding units.

For further details, see the Wave XIII (1980) documentation volume, pp. 81-82. Note that 1982 splitoffs received the SECU values of their main families from 1981.

#### Linking Data: Splitoffs

For 1981 and 1982, data has been provided to assist the user in linking splitoff information with that of their main families. The family-level data for each main family in 1982 (where V8207=0) contains values for V8732 representing the actual number of 1982 splitoff families from this main family with which interviews were taken. Thus, splitoff nonresponse cases are not included. On each splitoff data record (V8207=1), the family portion of the record contains the current year's interview number (V8202) of the associated main family at V8733; each individual-level record of splitoff persons also contains this interview number (V9075), as well as month and year the splitoff family was formed (V's 9073 and 9074) .

Month and year moved out are derived from actual move-out dates of splitoff individuals as reported on the main family coversheets. Thus, in the relatively rare event that two or more individuals move at different times from the main family to form one splitoff family, each individual receives his or her actual date of move as code values for V9073 and V9074. Any other splitoff individuals who appear for the first time in a splitoff family, such as nonsample spouses, friends, miscellaneous relatives and newborn children, receive the move-out date given for the splitoff mover-out. When, rarely, more than one splitoff mover-out date exists, these new persons receive the earlier one.

For those individuals who move from institutions to form their own splitoff families, code values of 98 are inserted into the tape locations for both month and year, and the miscellaneous other splitoff family members appearing for the

first time in the study receive missing data code values of 99 for these month and year variables.

#### Linking Data: Families Sharing Households

It is not uncommon for two or more family units to share living quarters. Panel families involved in such a situation may live with persons or families who are not sample members and who are not included by the study as family members because the arrangement is supposedly temporary and the situation resembles that of roommates, where expenses are split between the individuals involved. However, the members of one panel family may also move in with the members of another panel family. Financial disasters such as divorce and unemployment contribute heavily to such patterns of behavior. Most frequently, a former splitoff child already being interviewed separately returns home to live with panel parents for a period of time until resuming life on his or her own. Occasionally, siblings who are each being interviewed move in together to share an apartment, or aging panel parents go to live with their panel children.

To allow users the opportunity of utilizing the data set for such situations, several link variables were created for 1982. The first step involved expanding the code for V8215, Current Family Composition, to flag cases where this sharing occurred. The code differentiates between both panel and nonpanel primary and secondary families living in the same households. Codes 4, 6, and 8 indicate that such an arrangement exists between panel families. In a few cases, as many as four panel families lived under the same roof at the time of the 1982 interview, and thus there are three sets of linking variables so that all panel families living together are linked in every possible direction. V's 8734, 8736 and 8738 contain the 1982 interview numbers or ID numbers (V8202) of these other families. In addition, variables describing kinship ties between these families (V8735, V8737, V8739) were created.

#### Taxes

Each family's taxes were estimated again this year by computer. In the past, the variable for amount of remaining mortgage principal was used to help determine whether or not a family itemized deductions (for details, see the Wave XIII (1980) documentation volume, pp. 85-86). But because this data item was not included in the 1982 interview schedule, a replacement value was calculated, using 90% of the 1981 value for remaining mortgage principal (V7519).

The table for average fraction of income deducted by itemizers in various income classes has been updated. It is truncated at .40 for all incomes under \$14,000. The fractions are again the ratios of aggregates and were calculated

using Table 1 from 1980 Statistics of Income--Individual Tax Returns, p. 8. As before, these itemized deductions are used only when they exceed the standard deduction or "zero bracket amount" (\$2300 for single and head-of-household returns, \$3400 for married returns in 1981--unchanged from 1980).

Taxable Income	Average Fraction of Income Deducted	
	1979 & 1978 Taxes	1981 Taxes
Less than \$14,000	.33	.40
\$14,000-\$15,999	.30	.35
\$16,000-\$17,999	.28	.30
\$18,000-\$19,999	.26	.285
\$20,000-\$24,999	.23	.26
\$25,000-\$29,999	.215	.23
\$30,000-\$49,999	.20	.21
\$50,000-\$99,999	.19	.20
\$100,000 or more	.19	.19

#### Part 6: Data Available

For each year of this study, both a family-individual and a family-level tape have been created. In addition, the family-level tape has been merged with the previous years' family tapes so that there are two through fifteen-year merged family-level tapes. The individual-level tapes were merged on five through fifteen-year bases only. For a detailed description of these tapes, see the User Guide to the PSID. Two tapes were also created using the 1967 S.E.O. data for the part of the sample that was originally interviewed by the Census.

All inquiries for information about this study should be made in writing to: Member Services, Inter-University Consortium for Political and Social Research, Institute for Social Research, University of Michigan, P.O. Box 1248, Ann Arbor, Michigan 48106. Refer to Project 457701.

#### Part 7: Creating Family-Level Data from the Cross-Year Family-Individual Tape

Since the fifteen-year family-individual tape is very unwieldy with its approximately 20,000 cases and 16,600 tape locations, and users might well be interested in analyzing the data largely on a family-level basis, we have appended suggestions here on the creation of family files from the cross-year family-individual tape.

The structure of the family-individual file combines family-level data for each person in the family unit together with information unique to that person. Each individual is assigned a unique sequence number (V9022) which indicates the

person's position and status on the 1982 list of people in the family; thus, the first person listed is 01, the second person listed is 02, and so on. To create a family-level file, it is necessary only to write off onto a new tape those cases where V9022 = 01, since each family must have at least one member, although it may or may not have two or more. It is suggested that V9022 be used as opposed to V9023, Relationship to Head, because although each family has one and only one current head (i.e., where V9022 = 01-20 and V9023 = 1), it is possible that the prior year's head of the family has moved out since the previous interview and a new head is present for the current interview. Relationship to head for movers-out is coded with reference to the previous year's head, so for both the current head and the previous head, V9023 = 1.

#### Part 8: PSID User Guide

The PSID staff has completed a User Guide to the panel study. The volume was designed to supplement, but not replace, the documentation volumes issued for each year's data. It is published in a loose-leaf form, so that updates can easily be made as the need arises. Chapters in this User Guide cover PSID history, sample composition and weighting, how to deal with family composition and change, structure of the data tapes, study content, and other topics of interest to users. It is included with the set of documentation volumes that accompany an order for PSID tapes and can be ordered separately as well. For information on obtaining the User Guide, and other PSID products, contact Janet Vavra, Inter-University Consortium for Political and Social Research, P.O. Box 1248, Ann Arbor, Michigan, 48106 (313) 763-5010.

SECTION I I  
TAPE CODES FOR WAVE XV

Part 1: Fifteenth-Year Family-Level Tape Code

The following is the codebook for the fifteenth wave of family-level data from the interview schedule. The fifteen-year individual-level codebook will be found in Part 2 of this section. The variable numbers and tape locations refer to those on the 1968-1982 cross-year tape. For family-level codes for the first five waves of this study, see A Panel Study of Income Dynamics, Volume II. The remainder of the family-level codes for Waves VI through XIV will be found in successive volumes entitled A Panel Study of Income Dynamics: Procedures and Tape Codes. The distributions for the following variables are weighted and based on all families interviewed in 1982. To generate distributions on field amounts, percent nonzero and mean values are provided for relevant variables.

Tape Code Information

The example below illustrates the information contained in this codebook for a typical variable. The numbers in brackets do not appear in the codebook, but refer to the explanations which follow this example.

[1] 8209 = Cross-year variable number    [2] Name = 'TELEPHONE INT ? 1982'

[3] 14821 = Cross-year Tape Location    [4] MD=9

[5] Whether Telephone Interview in 1982

[9]-----

[6]      [7]      [8]

7.6      0.    Personal interview  
91.4     1.    Telephone Interview  
0.5      2.    Mail Interview

0.5      9.    NA

[1] Indicates the cross-year variable number. A variable number is assigned to each item in the study. (See the introduction to the alphabetical index, Section III, Part I, for a list of the range of variable numbers specific to each year.)

- [2] Indicates the abbreviated variable name (maximum of 25 characters) used in the OSIRIS system to identify the variable for the user. This abbreviated variable name is identical to the variable name listed in the OSIRIS dictionary for this variable. It is also listed as a subheading of the printout when a variable is accessed in an OSIRIS program. When used in this manner, the abbreviated variable name can be useful as a cross-reference tool, as well as a way to avoid errors. Refer to the list of abbreviations below for some help in translating the names into sensible English.
- [3] Indicates the starting location and ending location for this variable when the data are stored on a magnetic tape in the OSIRIS format.
- [4] Indicates the code value for missing data. In this example, code values equalling nine are missing data (MD=9). Alternative statements for other variables are "MD=0 or GE 8" or "MD=GE 7." In cases where nothing is written in this space, missing data are not permitted for the variable; values were usually assigned for such cases.
- Some analysis software packages (including the OSIRIS software package) require that certain types of data which the user desires to exclude from analysis can be designated as "missing data," e.g., inappropriate, unascertained, or ambiguous data categories. Although these codes have been defined by the PSID staff as missing data categories, this does not mean that the user should not or cannot use them in a substantive role if so desired.
- [5] Indicates the full question number that was used in the questionnaire, as well as the exact wording of the questionnaire item; for variables not coded directly from the questionnaire, such as generated data, an appropriate title appears here.
- [6] Indicates the weighted percentages for each code value. Blanks indicate that no cases have this value.
- [7] Indicates the code values occurring in the data for this variable. For variables containing field amounts, refer to the notes appearing directly below items [9] and [10] for the range of data values.

[8] Indicates the textual definitions of the codes. Abbreviations commonly used in the code definitions are “DK” (Don’t Know), “NA” (Not Ascertained), and “Inap.” (Inappropriate).

[9] Indicates the “% nonzero” value, where specified. These are weighted.

[10] Indicates the “mean nonzero” value, where specified. These are weighted.

Weekly Food Needs

---

mean = 1597.4

This variable's values are based on USDA Low-Cost Plan estimates of weekly food costs, according to the table below (reproduced from Family Economics Review, June 1967), summed for the family as it was at the time of the interview. Please refer to the wave VII (1974) documentation volume, pp. 39-41, for a complete description of the PSID's use of these standards.

INDIVIDUAL FOOD STANDARD (LOW COST)

<u>Age</u>	<u>Male</u>	<u>Female</u>
Under 4	\$3.90	\$3.90
4-6	4.60	4.60
7-9	5.50	5.50
10-12	6.40	6.30
13-15	7.40	6.90
16-20	8.70	7.20
21-35	7.50	6.50
36-55	6.90	6.30
56 and older	6.30	5.40

This same standard has been used in Waves I-XIV. Adjustments for inflation, etc., are left to users. The actual weekly food needs in dollars and cents is coded here.

OSIRIS USERS:

Note that this variable is defined in the dictionary as having two decimal places. The mean value above ignores these decimal places.

8252 = Cross-year variable number                      Name='1982 ANNUAL NEED STD  
 14919-14923 = Cross-year Tape Location

Annual Need Standard in 1981

---

mean = 3,011.0

This is the Orshansky-type poverty threshold based on an annual food needs standard which is derived from the weekly food costs in the preceding variable, converted to an annual amount, and adjusted for economies of scale by USDA rules as follows:

Single person . . . . .	add 20%
Two persons . . . . .	add 10%
Three persons . . . . .	add 5%
Four persons . . . . .	no change
Five persons . . . . .	deduct 5%
Six or more persons . . . . .	deduct 10%

An additional adjustment for diseconomies of small households (in rent, etc.) was made as follows:

- 4.89 times the food needs for single persons
- 3.70 times the food needs for two-person units
- 3.00 times the food needs for all other units

Please refer to the wave VII (1974) documentation volume, pp. 39-41, and to the User Guide, Chapter D, for further details on the need standard. Note that this variable is not adjusted for inflation, nor is it exactly comparable to the official poverty standard; such changes are left to users. This need standard allows for changes in family composition during 1981 and is not adjusted for farmers; see V8691 for an income/needs measure which makes such an adjustment.

M38, M39. Is your religious preference Protestant, Catholic, or Jewish, or what? What denomination is that?

This question was asked of all Heads in 1970 and for the 1971 through 1977 interviews was asked of all new Heads. Values were brought forward from previous data each year for families with the same Heads. In 1978, however, the question was not asked. In 1979, when the question was reinserted in the questionnaire, values were not brought forward from 1977 for families with unchanged Heads since that time. Therefore, any cases with new Heads in 1978 who are still Heads must by necessity contain missing data (i.e.. a value of zero). For those cases with the same Heads from 1977 through the present, please use 1977 religious preference, V5617.

Total 1981 Family Money Income (V8689)/1981 Family Needs (V8252).

This ratio is multiplied by 1.25 for farmers (those coded 801 in V8380 or 80 in V8407) to adjust for lower food costs. This is the only measure of income to needs on this tape which makes this adjustment for farmers. For a full description on the needs standard used, please refer to the wave VII (1974) documentation volume, pp. 39-41. Note that this need standard has not been adjusted for inflation.

This variable is generated by multiplying the weekly food needs (V8251) by 52 and then making the following adjustments for economies of scale:

- +20% for one-person families
- +10% for two-person families
- + 5% for three-person families
- no adjustment for four-person families
- 5% for five-person families
- 10% for families with six or more persons

The values represent the actual annual food standard in whole dollars for the 1982 family.

9999. Food standard of \$9,999 or more

1981 Average Hourly Earnings--Head

---

% nonzero = 76.3  
 mean nonzero = 938.9

The values for this variable represent the Head's average hourly earnings in dollars and cents per hour. The formula used for this variable's generation is as follows:

1981 Labor Income of Head (V8690)/1981 Hours of Work of Head (V8228)

OSIRIS USERS;

Note that this variable is defined in the dictionary as having two decimal places. The mean value above ignores these decimal places.

Value Per Room of 1982 Dwelling Unit

mean nonzero = 11,774.5

The values for this variable represent the actual value per room, calculated according to the following formula:

$$\frac{V8217 + [(V8221 + V8223) \times 10]}{V8360}$$

(1982 House Value)	+	[(1982 Rent Paid)	+	(1982 Value of Rent Received)	x 10]	/	V8360
							(Number of Rooms in 1982)

The following rules were used for each case, depending on the value of V8364:

- Homeowners (V8364=1): House value (V8217) divided by the number of rooms (V8360)
- Renters (V8364=5): Dwelling value, assumed to be 10 times the annual rent (V8221), divided by the number of rooms (V8360)
- Those neither owning nor renting (V8364=8): Dwelling value, assumed to be 10 times the value of rent received free in return for services (V8223). divided by the number of rooms (V8360)

99998. \$99,998 or more per room

---

mean = 52.0

The values for this variable represent the number of persons per room with one implied decimal place; e.g., a value of 20 here represents 2.0 persons per room. The formula used for creation of this variable is as follows:

Number of Persons in Family (V8249)/Number of Rooms in Dwelling (V8360)

OSIRIS USERS:

Note that this variable is defined in the dictionary as having one decimal place. The mean value above ignores this decimal place.

## Part 2: Fifteen-Year Individual-Level Tape Code

The following are the codes for all fifteen years of individual-level information. The variable numbers and tape locations refer to the 1968-1982 cross-year family-individual tape. Note that the fifteen year individual-level variable numbers differ from the five through fourteen year numbers because individual-level data are added at the end of the record of family-level data for all fifteen years. The user is also encouraged to read appendices F.3, "Individual Data Records," and F.4, "Splitoffs," in the User Guide for more details about individual-level data.

8743 = Cross-year variable number            Name='INDIVIDUAL NR            68'  
           15927-15928 = Cross-year Tape Location

1968 Person Number (Old Version)

This variable uses the pre-1977 system of assigning person numbers. It is not unique within 1968 ID number(V8740) for those individuals who moved in after the 1968 interview, i.e., whose 1968-1977 person numbers are in the range 00, 31-50. As individuals moved into families through 1977, tape locations were backfilled with this older version of person number. From 1978 on, however, when the person number system was revised to provide unique identification for each individual using the 1968 ID number in combination with the person number from the most current year of data, the backfilling process was discontinued and the field was filled with zeroes for movers in from 1978 onward.

- 01. Head
- 02-30. Other family members in the FU
- 31-50. Persons who were not part of the original 1968 families but who moved in before the 1978 interview
- 51-59. Children or stepchildren of the Head who were under 25 and who were living away from home in the armed forces, school, or other institutional housing at the time of the 1968 interview
- 61. Husband of Head in armed forces, jail, or other institution at the time of the 1968 interview
- 00. Individual, not an original sample member, who was born or moved in after the 1977 interview

8744 = Cross-year variable number            Name='AGE OF INDIVIDUAL            68'  
           15929-15930 = Cross-year Tape Location            MD=99

AGE AT THE TIME OF THE 1968 INTERVIEW:

- B2. How old are they and how are they related to you?
- B8. How old is (he/she)?

The values for this variable in the range 02-97 represent the actual age of the individual in years

- 01. Newborn up to second birthday
- 98. Ninety-eight years old or older
- 99. NA
- 00. Individual who was born or moved in after the 1968 interview;  
       V8743=00

8748 = Cross-year variable number                      Name='YRS SCHL COMPL                      68'  
 15934-15935 - Cross-year Tape Location                      MD=99

## COMPLETED EDUCATION:

B4. How many years of school did (he/she) finish?

B10. (IF NOT IN SCHOOL) How many years of school did (he/she) finish?

The values for this variable ranging from 01 through 16, indicate the grades completed; e.g., 08 signifies that the individual completed the eighth grade and is no longer in school. A code value of 16 means that the individual graduated from college.

00. Preschool; still in school; individual was born or moved in after the 1968 interview; V8743=00; V8747=1 or 9

99. NA

8749 = Cross-year variable number                      Name='MOVED IN LAST YR                      68'  
 15936 = Cross-year Tape Location

## WHETHER MOVED INTO THE FU DURING THE YEAR PRECEDING THE 1968 INTERVIEW:

B11. Has anyone moved into your household in the last year?

B12. (IF YES) Who moved in?

1. This individual moved in during the year preceding the 1968 interview

0. This individual lived in dwelling for a year or more preceding the 1968 interview or was born or moved in after the 1968 interview; V8743=00

8750 = Cross-year variable number                      Name='SOURCES OF INCOME                      68'  
 15937 = Cross-year Tape Location                      MD=9

## TYPE OF INCOME RECEIVED DURING 1967:

J21. What was that from?

1. Earnings from work, business, farm
2. Transfer income only (Social Security, pension, welfare, unemployment compensation, alimony)
3. Asset income only (rent, interest, dividends, royalties)
4. More than one of the above types

9. NA

0. Inap.; individual received no income in 1967; under 14 years old; born or moved in after the 1968 interview; V8743=00; V8744=01-13

310 - INDIVIDUAL DATA

8751 = Cross-year variable number                      Name='MONEY INCOME IND                      68'  
15938-15941 = Cross-year Tape Location                      MD=9999

TOTAL 1967 MONEY INCOME OF INDIVIDUAL:

J17. Did (MENTION MEMBER) have any income during 1967?

J19. How much was that?

J22. How much was that?

---

The values for this variable in the range 0001-9997 represent the actual income received by this individual in whole dollars. Heads' and Wives' records contain only the labor portions of their incomes; the user should take these items from the family portion of the data. Missing data were not assigned.

9998. \$9998 or more

9999. NA

0000. Inap.; individual received no income in 1967; under 14 years old; born or moved in after the 1968 interview; V8743=00; V8744=01-13; V8750=0

8752 = Cross-year variable number                      Name='HOURS WORKED IND                      68'  
15942-15945 = Cross-year Tape Location                      MD=9999

WORK HOURS IN 1967;

J23. How many weeks did (he/she) work last year?

J24. About how many hours a week was that?

J25. (IF NOT CLEAR) Did (he/she) work more than half time?

---

The values for this variable in the range 0001-9988 represent the actual hours worked by this individual during 1967. Missing data were not assigned.

9999. NA

0000. Inap.; individual did no work for money in 1967; under 14 years old; born or moved in after the 1968 interview: V8743=00; V8744=01-13; V8750=0,2,3

8753 = Cross-year variable number            Name='SHARE EXPENSES            68'  
 15946 = Cross-year Tape Location        MD=9

J26. Does (he/she) share in the family expenses, or what?

1. Yes, shares
3. Yes, shares but qualified
5. No
  
9. NA
  
0. Inap; individual received no income in 1967; under 14 years old; born or moved in after the 1968 interview; V8743=00; V8744=01-13; V8750=0

8754 = Cross-year variable number            Name='LIKELY TO MOVE            68'  
 15947 = Cross-year Tape Location        MD=9

J27. Is (he/she) likely to stay here with you or might (he/she) move away within the next few years?

1. Will remain in the FU
3. Pro-con, depends; will go to college
5. Will move away
  
8. DK
9. NA
  
0. Inap; no income; under 14 years old; born or moved in after the 1968 interview; V8743=00; V8744=01-13; V8750=0

8755 = Cross-year variable number            Name='EXTRA EARNER NR.            68'  
 15948 = Cross-year Tape Location

Extra Earner Number: 1968

Earners other than Head or Wife were numbered in ascending order by the amount of income earned, that is, the other earner with the highest earned income was coded one, the other earner with the next highest earned income was coded two, etc.

0. Individual earned no income in 1967; Head or Wife in 1968; born or moved in after the 1968 interview; V8743=00; V8746=1,2; V8750=0,2,3

6. Moved out of FU and into an institution between the 1969 and 1970 interviews
7. Living in 1969 but died by the time of the 1970 interview
8. Disappeared; moved out prior to the 1969 interview but included in FU for 1969; NA whether 5, 6 or 7
0. Inap.; in family or in institution both years; born or moved in after the 1970 interview; main family nonresponse by 1970; splitoff nonresponse from 1969; V8772=0000; V8773=00

8778 = Cross-year variable number Name='PERSON NUMBER 70'  
 15990-15991 = Cross-year Tape Location

1970 Person Number (Old Version)

---

This variable uses the pre-1977 system of assigning person numbers. It is not unique within 1968 ID number for those individuals who moved in after the 1968 interview, i.e., whose 1968-1977 person numbers are in the range 00, 31-50.

- 01-29. Individuals living in the FU at the time of the 1968 interview
- 31-49. Individuals who moved into the FU after the 1968 interview but before the 1970 interview
- 51-59. Children or stepchildren of the Head who were under 25 in 1968 and who were living in institutions at the time of the 1968 interview
61. Spouse who was in an institution at the time of the 1968 interview
00. Individuals who were born or moved in after the 1970 interview

322 - INDIVIDUAL DATA

8779 = Cross-year variable number Name='STOPPED SCHOOL 70'  
 15992 = Cross-year Tape Location MD=9

A6. Did any of the children stop going to school in 1969?  
 A7. Who was that?

---

- 1. Yes, stopped going to school
- 5. No, did not stop; was not a person under 25
- 9. NA
- 0. Individual was born or moved in after the 1970 interview; main family nonresponse by 1970; splitoff nonresponse from 1969; V8772=0000; V8773=00

8780 = Cross-year variable number Name='GRADE FINISHED 70'  
 15993-15994 = Cross-year Tape Location MD=99

COMPLETED EDUCATION IN 1970:

A8. What is the highest grade (he/she) finished?

The values for this variable (01-16) represent the actual grade of school completed; e.g., a value of 08 indicates that this individual has completed the eighth grade and was no longer in school. A code value of 16 indicates that this individual is at least a college graduate.

- 99. NA
- 00. Inap; did not stop school; Head or Wife in 1970; not a person under 25; was born or moved in after the 1970 interview; main family nonresponse by 1970; splitoff nonresponse from 1969; V8772=0000; V8773=00; V8779=5 or 9; V8773=01-20 and V8774=1 or 2

8781 = Cross-year variable number            Name='HRS/WK HOUSEWK            70'  
 15995-15996 = Cross-year Tape Location    MD=99

- G15. About how much time does (he/she) (do you) spend on this housework in an average week - I mean time spent cooking, cleaning, and other work around the house?
- G16. Does anyone else here in the household help with the housework?
- G17. Who is that?
- G18. About how much time does (he/she) spend on housework in an average week?

#### Type of Individual in 1972

This variable provides the only certain means of differentiating between sample and nonsample persons in 1972 who moved in after the 1968 interview.

- 1. Sample member (person number, old version, =01-20, 51-59, 61) living in a panel family or an institution from 1968 through 1972
- 2. Sample member born between the 1968 and 1972 interviews
- 3. Sample member (person number, old version, =01-20, 51-59, 61) living in a panel family or an institution in 1968 but who died or moved out by 1972 and became nonresponse -- V8826 equals zero for these persons
- 4. Nonsample member living with a panel family in 1972. V8826 equals zero for these persons.
- 0. Individual was born or moved in after the 1972 interview

8826 = Cross-year variable number            Name= 'INDIVIDUAL WEIGHT '

## 360 - INDIVIDUAL DATA

8861 = Cross-year variable number            Name='PERSON #                            75'  
16150-16151 = Cross-year Tape Location

### 1975 Person Number (Old Version)

---

This variable uses the pre-1977 system of assigning person numbers. It is not unique within 1968 ID number for those individuals who moved in after the 1968 interview, i.e., whose 1968-1977 person numbers are in the range 00, 31-50.

- 01-29. Individuals living in a sample family at the time of the 1968 interview
- 31-49. Individuals who moved into the FU after the 1968 interview but before the 1975 interview
- 51-59. Children or stepchildren of the Head who were under 25 in 1968 and who were living in institutions at the time of the 1968 interview
- 61. Spouse who was in an institution at the time of the 1968 interview
- 00. Individual was born or moved in after the 1975 interview

8862 = Cross-year variable number            Name='MARITAL STATUS:PAIRS 75'  
16152 = Cross-year Tape Location

### 1975 Married Pairs Indicator

---

This variable links pairs of individuals who were married or permanently cohabiting at the time of the 1975 interview. The Head and Wife or Head and Husband of Head each received a code value of 1 here. In some cases, users will find only one individual so coded, which indicates that the spouse of this individual moved out and never returned or died subsequent to 1975. Refer to User's Guide, Chapter F for further information.

- 0. Inap; not married; spouse was not in FU; individual was born or moved in after the 1975 interview; main family nonresponse by 1975; splitoff nonresponse by 1974; V8856=0000; V8857=00

1977 Revised Person Number

This revised version of person number allows unique identification of each individual's record on the data tape when combined with the 1968 ID Number (V8741). It also allows the user to differentiate among types of movers-in since the 1968 interview, reclassifying them as sample members or nonsample members. This variable is always filled with the revised person number for everyone, including movers-in from 1977 until the present.

- 01-19. Individuals who were living in original sample families at the time of the 1968 interview
20. Husband of the 1968 Head who was living in an institution at the time of the 1968 interview
- 21-29. Children or stepchildren of the Head who were under 25 and who were living in institutions at the time of the 1968 interview
- 30-69. Individuals who were born into the sample since the 1968 interview and who have at least one sample parent; these persons are sample members

### 1978 Revised Person Number

---

This revised version of person number allows unique identification of each individual's record on the data tape when combined with the 1968 ID Number (V8741). It also allows the user to differentiate among types of movers-in since the 1968 interview, reclassifying them as sample members or nonsample members. Note that there are some zero values for this variable.

- 01-19. Individuals who were living in original sample families at the time of the 1968 interview
- 20. Husband of the 1968 Head who was living in an institution at the time of the 1968 interview

### 1978 Married Pairs Indicator

---

This variable links pairs of individuals who were married or permanently cohabiting at the time of the 1978 interview. The Head and Wife or Head and Husband of Head each received a code value of 1 here. In some cases, users will find only one individual so coded, which indicates that the spouse of this individual moved out and never returned or died subsequent to 1978. Refer to User's Guide, Chapter F for further information.

- 0. Inap; not married; spouse was not in FU at the time of the 1978 interview; born or moved in after the 1978 interview; main family nonresponse by 1978; splitoff nonresponse by 1977; V8933=0000; V8934=00

8972 = Cross-year variable number                    Name='PERSON NUMBER OF IND '   
16362-16363 = Cross-year Tape Location

### 1979 Revised Person Number

---

This revised version of person number allows unique identification of each individual record on the data tape when combined with the 1968 ID Number (V8741). It also allows the user to differentiate among types of movers-in since the 1968 interview, reclassifying them as sample members or nonsample members. Note that there are some zero values for this variable.

- 01-19. Individuals who were living in original sample families at the time of the 1968 interview
- 20. Husband of the 1968 Head who was living in an institution at the time of the 1968 interview
- 21-29. Children or stepchildren of the Head who were under 25 and who were living in institutions at the time of the 1968 interview
- 30-69. Individuals who were born into the sample since the 1968 interview and who have at least one sample parent; these persons are sample members
- 70-99. Individuals who moved into the sample for the first time after the 1968 interview or who have no sample parent; these persons are not sample members
- 00. Individual had not been born or moved into a panel FU by the time of the 1979 interview

### 1979 Married Pairs Indicator

---

This variable links pairs of individuals who were married or permanently cohabiting at the time of the 1979 interview. The Head and Wife or Head and Husband of Head each received a code value of 1 here. In some cases, users will find only one individual so coded, which indicates that the spouse of this individual moved out and never returned or died subsequent to 1979. Refer to User's Guide, Chapter F for further information.

- 0. Inap; not married; spouse was not in FU at the time of the 1979 interview; individual was born or moved in after the 1979 interview; main family nonresponse by 1979; splitoff nonresponse by 1978; V8967=0000; V8968=00

##### 1980 Revised Person Number

---

This revised version of person number allows unique identification of each individual record on the data tape when combined with the 1968 ID Number (V8741). It also allows the user to differentiate among types of movers-in since the 1968 interview, reclassifying them as sample members or nonsample members. Note that there are some zero values for this variable.

- 01-19. Individuals who were living in original sample families at the time of the 1968 interview
- 20. Husband of the 1968 Head who was living in an institution at the time of the 1968 interview
- 21-29. Children or stepchildren of the Head who were under 25 and who were living in institutions at the time of the 1968 interview
- 30-69. Individuals who were born into the sample since the 1968 interview and who have at least one sample parent; these persons are sample members
- 70-99. Individuals who moved into the sample for the first time after the 1968 interview or who have no sample parent; these persons are not sample members
- 00. Individual had not been born or moved into a panel FU by the time of the 1980 interview

##### 1980 Married Pairs Indicator

---

This variable links pairs of individuals who were married or permanently cohabiting at the time of the 1980 interview. The Head and Wife or Head and Husband of Head each received a code value of 1 here. In some cases, users will find only one individual so coded, which indicates that the spouse of this individual moved out and never returned or died subsequent to 1980. Refer to User's Guide, Chapter F for further information.

- 0. Inap; not married; spouse was not in FU at the time of the 1980 interview; individual was born or moved in after the 1980 interview; main family nonresponse by 1980; splitoff nonresponse by 1979; V8994=0000; V8995=00

1981 Revised Person Number

---

This revised version of person number allows unique identification of each individual record on the data tape when combined with the 1968 ID Number (V8741). It also allows the user to differentiate among types of movers-in since the 1968 interview, reclassifying them as sample members or nonsample members. Note that there are some zero values for this variable.

- 01-19. Individuals who were living in original sample families at the time of the 1968 interview
- 20. Husband of the 1968 Head who was living in an institution at the time of the 1968 interview
- 21-29. Children or stepchildren of the Head who were under 25 and who were living in institutions at the time of the 1968 interview
- 30-69. Individuals who were born into the sample since the 1968 interview and who have at least one sample parent; these persons are sample members
- 70-99. Individuals who moved into the sample for the first time after the 1968 interview or who have no sample parent; these persons are not sample members
- 00. Individual had not been born or moved into a panel FU by the time of the 1981 interview

1982 Revised Person Number

---

This revised version of person number allows unique identification of each individual record on the data tape when combined with the 1968 ID Number (V8741). It also allows the user to differentiate among types of movers-in since the 1968 interview, reclassifying them as sample members or nonsample members. Note that there are no zero values for this variable.

- 01-19. Individuals who were living in original sample families at the time of the 1968 interview
- 20. Husband of the 1968 Head who was living in an institution at the time of the 1968 interview
- 21-29. Children or stepchildren of the Head who were under 25 and who were living in institutions at the time of the 1968 interview
- 30-69. Individuals who were born into the sample since the 1968 interview and who have at least one sample parent; these persons are sample members
- 70-99. Individuals who moved into the sample for the first time after the 1968 interview or who have no sample parent; these persons are not sample members

1982 Individual Weight

This weight variable was simply carried forward from the previous year (1981). If a sample individual was born into the family or returned after an absence of a year or more (i.e., the 1981 sequence number, V9022, equals 00), then the family weight for 1982 (V8727) was assigned.

00. Individual was not a sample member; V9056=70-99

### SECTION III INDEXES

In this fifteenth-year documentation, five variable indexes are included which attempt to organize the data for easy reference. The first is a topical alphabetic arrangement of family-level data only, with the pertinent variables listed. This index includes all family-level variables for the entire fifteen-year tape, and is included in the PSID User Guide, Appendix 2. The second index is a list of the 1982 family-level data in order by 1982 variable number with comparable 1968-1981 variables. The third is an alphabetic index similar to the first one, but incorporating only the individual-level variables from the fifteen-year tape. Fourthly, there is an individual-level index similar in format to the numerical-order one for family-level data described above. The final index compares questions from Sections C, D, and E (Head's employment sections), and Sections F, G, and H (Wife's employment sections) of the questionnaire for the convenience of analysts. However, all individual variable numbers are valid only for the fifteenth-year merged tape. Although all of these indexes have been checked and double-checked, the possibility remains that there may still be errors. Therefore, we cannot warn the user strongly enough to please use these only in conjunction with the tape codes.

These indexes list variable numbers only. For those who are using tape location format, a listing of the dictionary (found in the first file, preceding the data, on a standard OSIRIS data set) will provide a quick reference of the tape locations corresponding to each variable number.

#### Part 1: Alphabetical Index of Fifteen-Year Family-Level Data<sup>2</sup>

Since this index is a compilation of all variables on the cross-year family-level tape for 1968 through 1982 interviewing years, no individual-level variable numbers are included, although cross-references for those variables are listed at the appropriate content headings. All raw data and generated variables are listed in alphabetical order by topic. Each alphabetic entry is accompanied by a list of variable numbers showing when and where comparable data exist for each of the years of the study. Small changes in questions posed or in coding conventions for a given question are noted in footnotes to variables. The list of footnotes is located at the end of this index.

---

<sup>2</sup>This index is also printed in the PSID User Guide as Appendix 2.

Headings may have more than one variable number listed for a given year. This generally indicates that the same question was asked of different subgroups within the sample (employed and unemployed respondents, for example). The “0. Inap.;...” code for each of these variables contains details on which subgroups have no data on such variables. When in doubt, always refer to the questionnaire or editing worksheets, annotated with variable numbers. in the appropriate years’ documentation volumes. Note that disaggregations of large subsections of content have been performed for this year’s version of the index. Thus, removed from the INCOME sections are Child Support, Worker’s Compensation, etc. There are abundant cross references for this disaggregation. All accuracy codes can be found under the ACCURACY heading rather than under a specific topic such as HOUSING . Note that such terms as “head” or “wife” do not necessarily designate the same person in the data from different years.

Although we have spent much more time on this index than is prudent for sound mental health, errors remain. Since we plan to use this index for all future versions of the User Guide and documentation volumes, and it is also the basis for generation of the family-level numerical index which follows in Part 2 of this section, we would appreciate information on such errors. Please send information about them to:

Family-level variables are associated with interviewing years as follows:<sup>3</sup>

Variables 1-439	1968 family data
Variables 441-909	1969 family data that precede change variables (includes raw data and most generated variables)
Variables 910-989	1968-69 change variables <sup>a</sup>
Variables 990-1013	1969 family data that follow change variables (includes deciles and a few other variables)
Variables 1101-1627	1970 family data
Variables 1701-1748	1970 Census data on county. See Wave VII (1974) documentation, pp. 154-161, for details.
Variables 1749-1765	Consumer price indexes for each area for each year 1968-1972. See Wave VII (1974) documentation, pp. 162-166, for details.
Variables 1801-2344	1971 family data
Variables 2401-2978	1972 family data
Variables 3001-3303	1973 family data
Variables 3401-3729	1974 family data
Variables 3801-4230	1975 family data
Variables 4301-4707	1976 Head's interview data
Variables 4708-5027	1976 Wife's interview data
Variables 5028-5112	1976 other family data
Variables 5201-5680	1977 family data
Variables 5701-6219	1978 family data
Variables 6301-6813	1979 family data
Variables 6901-7455	1980 family data
Variables 7501-8109	1981 family data
Variables 8201-8739	1982 family data

COMPARISONS OF INCOME (see INCOME, Comparisons; FUTURE PLANS AND EXPECTATIONS; PAST AND PRESENT COMPARISONS)

CONSUMER PRICE INDEX (relative to 1959 cost of living, see COUNTY DATA)

COUNTY (see LOCATION MEASURES, State and County; MOBILITY)

COUNTY DATA (see also EMPLOYMENT, Job Market Conditions; LOCATION MEASURES; MOBILITY)

Variables 1701-1724 are based on 1970 Census information for the family unit's county of residence at the time of the 1968 interview; Variables 1725-1748 are for the family unit's county of residence at the time of the 1974 interview. Other variables are obtained from questionnaires sent to state unemployment offices and from other sources noted in the documentation volumes. Details of these codes are printed in the Wave VIII Supplement (1974), pp. 151-166.

## NONCOMPARABILITY NOTES

- <sup>a</sup>No missing data allowed for this variable.
- <sup>b</sup>In 1972 there are four codes for this variable. However, they may be combined to produce comparable categories.
- <sup>c</sup>Data on religious preference are incomplete for families with new Heads in 1978. See the notes in the Wave XV (1982) Documentation Volume, Section II, Part 1, under V8671 and V8672 or refer to the User Guide, Chapter D.
- <sup>d</sup>Code is truncated; see tape code.
- <sup>e</sup>A code for missing data was allowed for this variable, but in other years missing data were assigned.
- <sup>f</sup>This variable cannot be made comparable to the other years' variables.
- <sup>g</sup>Field widths differ. Truncation of some variables in this list is necessary. See tape codes.
- <sup>h</sup>In 1968, illness hours were calculated differently; only eight hours per day were allowed after the first eight weeks, as opposed to twelve in subsequent years.
- <sup>i</sup>Alcohol and cigarette costs were asked in these years and subtracted from the food bill if the respondent said they were included. Therefore, these variables may not be strictly comparable.
- <sup>j</sup>There was a greater possibility of double counting of food subsidies for total food expenditures in earlier years, which was largely eliminated beginning in 1972 with revised question formats. Since 1979 (reflected in 1980 and later years' data), food stamps have cost nothing, so errors should be negligible.
- <sup>k</sup>This variable occasionally includes Others; thereafter only Head and/or Wife were included.
- <sup>l</sup>Dates differ; check tape codes.
- <sup>m</sup>This is a bracket variable. If field amounts were coded, they may be bracketed for comparability.
- <sup>n</sup>Coding structure and/or categories differ; see tape codes for details.
- <sup>o</sup>Combines information on Heads (or Wives) with different employment statuses. In later years, separate variables were coded for the employed, the unemployed, and those out of the labor force. See tape codes for details on who was asked what.
- <sup>p</sup>Code 999 includes those who do not have an hourly wage (e.g., salaried, paid by piecework, or on commission). The other variables in the list include such persons in the 000 code.
- <sup>q</sup>This variable is one of two mentions coded from the responses or is a double-mention variable (a two-digit variable with the first digit equalling the data value for the first mention and the second equalling the data value for

the second mention). Both first and second mention variables may or may not be priority coded. See tape codes for details.

<sup>r</sup>Has extra and/or alternate components; see tape code descriptions for details.

<sup>s</sup>For these years, code 9, not ascertained, includes cases where data are missing on whether lump sums were received or not. In all successive waves, however, such cases are included in the code category 0, inappropriate.

<sup>t</sup>Not asked of retired, housewives, students, or permanently disabled Heads in 1968. From 1969 onward, only new Heads were asked these questions. Therefore, these variables provide no information for Heads who have remained the same since 1968 and who were not in the labor force in 1968. From the 1968 through the 1975 waves, code category 0 included such cases. From the 1976 wave through the present, such cases have been recoded as 9, not ascertained, for the filter question.

<sup>u</sup>Does not include adjustment for farmers.

<sup>v</sup>In 1968, 9's were coded instead of 0's when Head did no work for money and therefore had no hourly earnings.

<sup>w</sup>Contains some components which were not available in later years. Thereafter, new components were added. See tape codes for details.

<sup>x</sup>Bracket breakpoints differ from later years'.

<sup>y</sup>Note that these variables are not comparable with each other. For a discussion of weights and their history in the PSID, see the User Guide, Chapter E.

<sup>z</sup>Extra value of food received with food stamps was added into this variable in 1972 if V2482=5.

<sup>aa</sup>This variable was reported by the Head of the family, whereas the variable annotated pp is taken from the Wife's interview. No attempt has been made to reconcile disparities between these two variables since comparability with other years could be affected.

<sup>bb</sup>From 1968-1974, V's 481, 1154, etc. report annual housework hours for Wife or unmarried Head, and V's 483, 1156, etc. are those for married male Heads.

<sup>cc</sup>These variables were edited to subtract \$100 for insurance premiums if they were included in the amounts reported. Property taxes were imputed and then also subtracted if R said they were included.

<sup>dd</sup>There were no missing data on property tax variables in 1968-1975 because they were imputed. Refer to tape codes for those years for formula.

<sup>ee</sup>In 1975, these variables include both Heads employed by others and those who work for someone else as well as themselves.

<sup>ff</sup>From 1976 on, number of months was coded. In previous years, a bracket code on number of years was used, and only the one question, "How long have you had your present job?" was asked. For those earlier years, overlapping exists between length of present employment and length of present job for some cases.

<sup>gg</sup>For calculating this variable, V471, 10 cents per mile was used. In later years, 5 cents per mile was assumed.

- hh From 1976 on, separate questions were asked of employees receiving different forms of compensation. Previously, all were asked to calculate per hour wage rates.
- ii In 1981, costs of separate components of utilities, such as electricity, gas and water, were asked separately. Thus, the total annual utilities variable was generated by adding those components and no assignments were made.
- jj Background section variable, asked only of new Heads/Wives. Data values for cases with same Heads/Wives as in the previous year have been carried forward from the time when these persons most recently became new Heads/Wives. Some of these variables may require updating. See User Guide, Chapter D, or 1982 Documentation Volume, Section II, Part 1, variable descriptions.
- kk In 1976, these variables included both those working for someone else and those working for someone else and those working for someone else and self (V4461=1 and 3).
- ll These variables have been generated since 1977 for comparability with 1968-1976 data. See User Guide, Chapter G, for further details.
- mm Federal Income Tax Variables have been generated by computer beginning in 1980. For a description and details, see the User Guide, Chapter D.
- nn For these variables, questions were asked separately of Head, Wife and Others for Medicare, Medicaid and similar programs. Filter questions were used for receipt of Social Security, ADC/AFDC, SSI and other welfare, whereas in later years, Medicare/Medicaid benefits questions were asked of all families.
- oo 1968-1972 data have no comparable variable. This can be created, however, by multiplying the annual value of home if rented by .1 by the work for housing code and subtracting it and time spent on car repairs from home production hours. Thus, the formula for this using 1972 data would be:
- $$V2438 - V2421 - .1 (V2433XV2431)$$
- The annual value of home if rented equals zero except for those who neither own nor rent their homes; this is a small fraction of the sample.
- pp These variables are coded directly from the wives' questionnaire in 1976, reported by wives themselves.
- qq In 1968, all housework hours were taken from tables. See the Waves I-V (1968-1982) Documentation, Volume II, Section II, code description for V59.
- rr Adding V520 to these components allows comparability with other years. See the waves I-V (1968-1972) Documentation, Volume II, Section II, for further details.
- ss On all cross-year files for 1968-1978, 1968-1979, and 1968-1980, there are some errors in these variables. See User Guide, Chapter G for further details.
- tt Hours spent in public schools were not included in these variables. Also, the 1979 variables for child care hours are for the youngest child under 12 only.
- uu Hours of help from others outside the FU were included; see tape code.

556

<sup>vv</sup>This amount was assigned for all cases in 1968; see the Waves I-V (1968-1972) Documentation, Volume II, Section II for details.

<sup>ww</sup>Amount saved on additions and repairs is not included.

## Part 2: Numerical Index of Fifteen-Year Family-Level Data

This index lists the 1982 family-level variables in numerical order with comparable 1968-1981 variables included. Note that the 1976 heads' and wives' interview data are not listed in separate columns.

Where blanks occur, there is no similar data item for that particular 1982 variable.<sup>1</sup> Data items not asked in 1982 are also not included in this concordance. Thus, this index does not contain all the cross-year family-level variables. Small differences, such as coding formats or field width variations, have been annotated; the lower case alphabetic characters appearing directly beneath the variables to which they refer indicate footnoted differences. These footnotes are identical with those used for the alphabetical family index in Part 1 of this section. A list of the footnotes is located at the end of this section, also.

All variables listed herein should be comparable for analysis purposes with, perhaps, some recoding. Again, despite careful checking, errors may exist, and the user should consult the tape codes before doing analysis.

Please send information regarding any errors discovered to:

<sup>1</sup>The exceptions are the employment-related variables that were coded for all heads (1968 and 1969 data) or all wives (1968-1975, 1977 and 1978 data) regardless of employment status. These are listed with the appropriate 1982 variables from the sections asked of the employed only.

## NONCOMPARABILITY NOTES

- <sup>a</sup>No missing data allowed for this variable.
- <sup>b</sup>In 1972 there are four codes for this variable. However, they may be combined to produce comparable categories.
- <sup>c</sup>Data on religious preference are incomplete for families with new Heads in 1978. See the notes in the Wave XV (1982) Documentation Volume, Section II, Part 1, under V8671 and V8672 or refer to the User Guide, Chapter D.
- <sup>d</sup>Code is truncated; see tape code.
- <sup>e</sup>A code for missing data was allowed for this variable, but in other years missing data were assigned.
- <sup>f</sup>This variable cannot be made comparable to the other years' variables.
- <sup>g</sup>Field widths differ. Truncation of some variables in this list is necessary. See tape codes.
- <sup>h</sup>In 1968, illness hours were calculated differently; only eight hours per day were allowed after the first eight weeks, as opposed to twelve in subsequent years.
- <sup>i</sup>Alcohol and cigarette costs were asked in these years and subtracted from the food bill if the respondent said they were included. Therefore, these variables may not be strictly comparable.
- <sup>j</sup>There was a greater possibility of double counting of food subsidies for total food expenditures in earlier years, which was largely eliminated beginning in 1972 with revised question formats. Since 1979 (reflected in 1980 and later years' data), food stamps have cost nothing, so errors should be negligible.
- <sup>k</sup>This variable occasionally includes Others; thereafter only Head and/or Wife were included.
- <sup>l</sup>Dates differ; check tape codes.
- <sup>m</sup>This is a bracket variable. If field amounts were coded, they may be bracketed for comparability.
- <sup>n</sup>Coding structure and/or categories differ; see tape codes for details.
- <sup>o</sup>Combines information on Heads (or Wives) with different employment statuses. In later years, separate variables were coded for the employed, the unemployed, and those out of the labor force. See tape codes for details on who was asked what.
- <sup>p</sup>Code 999 includes those who do not have an hourly wage (e.g., salaried, paid by piecework, or on commission). The other variables in the list include such persons in the 000 code.
- <sup>q</sup>This variable is one of two mentions coded from the responses or is a double-mention variable (a two-digit variable with the first digit equalling the data value for the first mention and the second equalling the data value for

the second mention). Both first and second mention variables may or may not be priority coded. See tape codes for details.

- <sup>r</sup>Has extra and/or alternate components; see tape code descriptions for details.
- <sup>s</sup>For these years, code 9, not ascertained, includes cases where data are missing on whether lump sums were received or not. In all successive waves, however, such cases are included in the code category 0, inappropriate.
- <sup>t</sup>Not asked of retired, housewives, students, or permanently disabled Heads in 1968. From 1969 onward, only new Heads were asked these questions. Therefore, these variables provide no information for Heads who have remained the same since 1968 and who were not in the labor force in 1968. From the 1968 through the 1975 waves, code category 0 included such cases. From the 1976 wave through the present, such cases have been recoded as 9, not ascertained, for the filter question.
- <sup>u</sup>Does not include adjustment for farmers.
- <sup>v</sup>In 1968, 9's were coded instead of 0's when Head did no work for money and therefore had no hourly earnings.
- <sup>w</sup>Contains some components which were not available in later years. Thereafter, new components were added. See tape codes for details.
- <sup>x</sup>Bracket breakpoints differ from later years'.
- <sup>y</sup>Note that these variables are not comparable with each other. For a discussion of weights and their history in the PSID, see the User Guide, Chapter E.
- <sup>z</sup>Extra value of food received with food stamps was added into this variable in 1972 if V2482=5.
- <sup>aa</sup>This variable was reported by the Head of the family, whereas the variable annotated pp is taken from the Wife's interview. No attempt has been made to reconcile disparities between these two variables since comparability with other years could be affected.
- <sup>bb</sup>From 1968-1974, V's 481, 1154, etc. report annual housework hours for Wife or unmarried Head, and V's 483, 1156, etc. are those for married male Heads.
- <sup>cc</sup>These variables were edited to subtract \$100 for insurance premiums if they were included in the amounts reported. Property taxes were imputed and then also subtracted if R said they were included.
- <sup>dd</sup>There were no missing data on property tax variables in 1968-1975 because they were imputed. Refer to tape codes for those years for formula.
- <sup>ee</sup>In 1975, these variables include both Heads employed by others and those who work for someone else as well as themselves.
- <sup>ff</sup>From 1976 on, number of months was coded. In previous years, a bracket code on number of years was used, and only the one question, "How long have you had your present job?" was asked. For those earlier years, overlapping exists between length of present employment and length of present job for some cases.
- <sup>gg</sup>For calculating this variable, V471, 10 cents per mile was used. In later years, 5 cents per mile was assumed.

- hh From 1976 on, separate questions were asked of employees receiving different forms of compensation. Previously, all were asked to calculate per hour wage rates.
- ii In 1981, costs of separate components of utilities, such as electricity, gas and water, were asked separately. Thus, the total annual utilities variable was generated by adding those components and no assignments were made.
- jj Background section variable, asked only of new Heads/Wives. Data values for cases with same Heads/Wives as in the previous year have been carried forward from the time when these persons most recently became new Heads/Wives. Some of these variables may require updating. See User Guide, Chapter D, or 1982 Documentation Volume, Section II, Part I, variable descriptions.
- kk In 1976, these variables included both those working for someone else and those working for someone else and those working for someone else and self (V4461=1 and 3).
- ll These variables have been generated since 1977 for comparability with 1968-1976 data. See User Guide, Chapter G, for further details.
- mm Federal Income Tax Variables have been generated by computer beginning in 1980. For a description and details, see the User Guide, Chapter D.
- nn For these variables, questions were asked separately of Head, Wife and Others for Medicare, Medicaid and similar programs. Filter questions were used for receipt of Social Security, ADC/AFDC, SSI and other welfare, whereas in later years, Medicare/Medicaid benefits questions were asked of all families.
- oo 1968-1972 data have no comparable variable. This can be created, however, by multiplying the annual value of home if rented by .1 by the work for housing code and subtracting it and time spent on car repairs from home production hours. Thus, the formula for this using 1972 data would be:
- $$V2438 - V2421 - .1(V2433XV2431)$$
- The annual value of home if rented equals zero except for those who neither own nor rent their homes; this is a small fraction of the sample.
- pp These variables are coded directly from the wives' questionnaire in 1976, reported by wives themselves.
- qq In 1968, all housework hours were taken from tables. See the Waves I-V (1968-1982) Documentation, Volume II, Section II, code description for V59.
- rr Adding V520 to these components allows comparability with other years. See the waves I-V (1968-1972) Documentation, Volume II, Section II, for further details.
- ss On all cross-year files for 1968-1978, 1968-1979, and 1968-1980, there are some errors in these variables. See User Guide, Chapter G for further details.
- tt Hours spent in public schools were not included in these variables. Also, the 1979 variables for child care hours are for the youngest child under 12 only.
- uu Hours of help from others outside the FU were included; see tape code.

<sup>vv</sup>This amount was assigned for all cases in 1968; see the Waves I-V (1968-1972) Documentation, Volume II, Section II for details.

<sup>ww</sup>Amount saved on additions and repairs is not included.

### Part 3: Alphabetical Index of Fifteen-Year Individual-Level Data

This index lists each individual-level variable by topic, and is modeled after the alphabetical family-level data index (Part 1 of this section). The headings are the same as those listed in the family-level index under INDIVIDUAL DATA. Users must be especially careful with these individual variable indexes, because all of the variable numbers change each year for individual-level data items. Below are the ranges for each year's individual portion of the data on the fifteen-year merged tape.

## NONCOMPARABILITY NOTES

- <sup>a</sup>In 1968, no movers-out were coded. See tape code.
- <sup>b</sup>The codes for these variables are the reverse of those for the other years.
- <sup>c</sup>Codes for type of income have changed very much over the years. One can extract at least whether labor vs. asset vs. transfer from the variables listed in the index for earlier years. See tape codes for further details.
- <sup>d</sup>Missing data were coded in 1968-1974 on this variable; in 1975 the system was changed, and accuracy codes have been included since. See footnote h below.
- <sup>e</sup>In 1969-1972, the code merely states whether the individual has a disability or the individual needs extra care. For 1976 and 1977, only one question was asked, ascertaining whether this person requires extra care or is disabled. For 1978, however, the disability sequence is much more detailed for each individual.
- <sup>f</sup>In 1975 and 1976, only the last digit of year moved in/out was coded.
- <sup>g</sup>In 1974, transfer income was defined only as including or not including welfare payments. In 1975 and 1976, transfer income type was divided into the various components that are normally coded on this study. From 1977 on, this variable has been further divided to separate alimony from child support and unemployment from workmen's compensation, and the code of necessity becomes a two-digit one. Also, the codes assigned to each category differ slightly. Please check tape code before using.
- <sup>h</sup>Due to a growing demand for more detailed information on individual incomes, each person's income was split into taxable and transfer amounts from 1975 on. By adding these two components, new variables can be created that will be comparable to the individual's total money income of the 1968 through 1974 waves. It was also thought unnecessary to continue coding missing data on individual-level incomes and work hours, as had been done since 1968, because editors must assign amounts for family-level totals anyway. Therefore, each income and hours variable has its own accuracy code from 1975 on. For comparability, one could exclude all cases where an assignment was made in those years and cases with missing data in 1968-1974. Great care must be exercised in attempting cross-year comparisons for Heads and/or Wives using the individual-level work hours and money income variables. The following table is a year-by-year synopsis of the status of these variables. In general, since for Heads and Wives all the income and work hours information is available in a more correct and detailed form at the family level of the data, a recoding program should be utilized to insert those data rather than using information found in the individual portion of the data records--THIS APPLIES TO HEADS AND WIVES ONLY.

<sup>i</sup>The 1979-1982 variables indicate the grades of school completed both for nonHead and nonWife individuals either still in school or who have finished their education. The 1968-1978 variables, excepting V8879 and V8824, indicate completed levels only for those who have finished their education. V8879 and V8824, two constructed variables, are comparable with the 1979-1982 variables in that they contain levels of attainment as of the time of the interview for everyone. However, these two variables include values for Heads and Wives, too. There are also some special codes that indicate missing data. See tape codes for details.

<sup>j</sup>Categories differ slightly; see tape code for details.

<sup>k</sup>The 1968 interview number was coded in both a 4-digit and 5-digit form. Use the 4-digit number, V8741. See tape code for further details.

<sup>l</sup>Field width differs.

602 - INDIVIDUAL DATA

#### Part 4: Numerical Index of Fifteen-Year Individual-Level Data

The 1982 individual-level variables are listed in numerical order, with the comparable 1968-1981 variables included. Where blanks occur, there is no similar data item from previous years for that particular 1982 variable. There are also some data items from previous years excluded from this index since no comparable variable exists for 1982. Thus, this index does not include all the cross-year individual-level variables. The alphabetical index of the individual-level variables, however, includes all such variables. There are some differences between years in field width and coding format among the variables listed in this index, which have been annotated. The lower case alphabetic characters indicating such differences appear directly below the variables to which they refer. A list of these footnotes appears at the end of this index.

## NONCOMPARABILITY NOTES

<sup>a</sup>In 1968, no movers-out were coded. See tape code.

<sup>b</sup>The codes for these variables are the reverse of those for the other years.

<sup>c</sup>Codes for type of income have changed very much over the years. One can extract at least whether labor vs. asset vs. transfer from the variables listed in the index for earlier years. See tape codes for further details.

<sup>d</sup>Missing data were coded in 1968-1974 on this variable; in 1975 the system was changed, and accuracy codes have been included since. See footnote h below.

<sup>e</sup>In 1969-1972, the code merely states whether the individual has a disability or the individual needs extra care. For 1976 and 1977, only one question was asked, ascertaining whether this person requires extra care or is disabled. For 1978, however, the disability sequence is much more detailed for each individual.

<sup>f</sup>In 1975 and 1976, only the last digit of year moved in/out was coded.

<sup>g</sup>In 1974, transfer income was defined only as including or not including welfare payments. In 1975 and 1976, transfer income type was divided into the various components that are normally coded on this study. From 1977 on, this variable has been further divided to separate alimony from child support and unemployment from workmen's compensation, and the code of necessity becomes a two-digit one. Also, the codes assigned to each category differ slightly. Please check tape code before using.

<sup>h</sup>Due to a growing demand for more detailed information on individual incomes, each person's income was split into taxable and transfer amounts from 1975 on. By adding these two components, new variables can be created that will be comparable to the individual's total money income of the 1968 through 1974 waves. It was also thought unnecessary to continue coding missing data on individual-level incomes and work hours, as had been done since 1968, because editors must assign amounts for family-level totals anyway. Therefore, each income and hours variable has its own accuracy code from 1975 on. For comparability, one could exclude all cases where an assignment was made in those years and cases with missing data in 1968-1974. Great care must be exercised in attempting cross-year comparisons for Heads and/or Wives using the individual-level work hours and money income variables. The following table is a year-by-year synopsis of the status of these variables. In general, since for Heads and Wives all the income and work hours information is available in a more correct and detailed form at the family level of the data, a recoding program should be utilized to insert those data rather than using information found in the individual portion of the data records--THIS APPLIES TO HEADS AND WIVES ONLY.

608 - INDIVIDUAL DATA

<sup>i</sup>The 1979-1982 variables indicate the grades of school completed both for nonHead and nonWife individuals either still in school or who have finished their education. The 1968-1978 variables, excepting V8879 and V8824, indicate completed levels only for those who have finished their education. V8879 and V8824, two constructed variables, are comparable with the 1979-1982 variables in that they contain levels of attainment as of the time of the interview for everyone. However, these two variables include values for Heads and Wives, too. There are also some special codes that indicate missing data. See tape codes for details.

<sup>j</sup>Categories differ slightly; see tape code for details.

<sup>k</sup>The 1968 interview number was coded in both a 4-digit and 5-digit form. Use the 4-digit number, V8741. See tape code for further details.

<sup>l</sup>Field width differs.

## Part 5: Index of the 1982 Employment Sections

This index compares all the variables from the employment sections for Heads (C, D & E) and Wives of Heads (F, G & H); if there is a Wife of Head in the Family Unit, V8537=1. Which section is asked is based on employment status (V8374 for Heads, V8538 for Wives).

Many of these variables represent the same or similar questions asked in more than one section. In analysis it might be desirable, for instance, to look at weeks worked in 1981 for all Heads regardless of whether they are currently employed or not. With the tabulations in this index, the user can tell at a glance whether or not the same question was asked of all Heads. Using the example given above, one could generate a new variable on weeks worked in 1981 simply by adding V8403 + V8482 + V8528, since one and only one of these variables contains this information for each Head, the other two containing zeros indicating that the question is inappropriate.

Footnotes earmark variables where the wording or framework of the questions varies significantly from those to which they are compared.

## Appendix 1: Design Aspects of a Panel of Individuals and Families

Most panel data collection projects have followed individuals rather than families and have not had to cope with the problems inherent in panels of families. A panel of individuals can begin with a sample of individuals from a population. The sampling procedures may result in a known selection probability for each individual and the inverse of this probability can be used as a weight to produce estimates of population parameters from the sample. When followed over time, individuals may "leave" the population through death, emigration, quitting (if the population is, say, the workforce in a firm), dropping out (if the population is school children or labor force participants), or simply by aging if the population is constrained to a certain age range. Similarly, individuals may join the population by birth, immigration, or other means. Most panel studies of individuals choose to ignore these dynamic elements of the population at large and merely continue to follow as many of the original sample as possible, perhaps with adjustments to the weights for differential nonresponse or with statistical adjustments for sample selection bias. The result is that the sample may remain representative with respect to the original population from which it is drawn, but not with respect to changes that have taken place in the population since the beginning of the panel.

Panel studies of families must cope with the dynamic aspects of the population of families. New families are "born" into the population when children leave their parental homes or when a married couple splits into two families through separation or divorce, or through immigration. If a panel study is to maintain a representative sample of both the individuals and the families in the population then there must be a replacement mechanism that allows families and individuals to enter the sample with known selection probabilities.

The Panel Study of Income Dynamics began in 1968 with a probability sample of families and, therefore, of individuals living in those families.<sup>1</sup> Since dwellings have only one chance of selection regardless of the number of inhabitants, the sampling probability that applies to the family also applies to each member of that family. In the first year of the study, then, the family weight is the appropriate individual weight for all individuals in that family.

---

<sup>1</sup>In fact, the original sample consisted of two parts--2930 families as part of a fresh cross-section drawn from the Survey Research Center's national sampling frame and 1872 families with 1966 incomes less than 1.5 times the official poverty line, who had been interviewed in the two years prior to 1968 as part of the Census' Survey of Economic Opportunity. Note that the selection

Over time, individuals retain their selection probabilities, with possible adjustments for differential individual nonresponse.<sup>2</sup> Individuals enter the population through birth and immigration. The PSID replacement mechanism for births is to include individuals born into sample families as part of the sample of individuals, assigning to them the selection probability and weight of the family into which they are born. No attempt has been made to make the PSID representative with respect to immigration since 1968.

The "birth" and "death" of families is a more complicated process to account for in the study design. If a married couple that is part of the original sample breaks up into two families through divorce, and neither remarries, then each new family has the selection probability of the unified family prior to the divorce. The two new families have the same weight as the original family, and weighted estimates from the sample reflect the fact that there are now two of these families in the population as a result of these kinds of changes.

But now suppose that a new family is "born" when a divorced sample spouse marries a nonsample individual or when a child in an original sample family leaves home and marries a nonsample member. That new family has two ways of being selected--the known probability of the sample spouse and the unknown probability of the non-sample spouse. The PSID follows all such new families and assumes that people marry others like themselves--i.e., with the same selection probability.<sup>3</sup> If the selection probabilities of the spouses are equal, then the selection probability of that new family is twice the selection probability of the sample spouse, and the family weight is half of the individual weight of the sample spouse.<sup>4</sup> Children born into these families are assigned this halved weight as their individual weight.

---

probabilities for a family in the combined sample will differ from its selection probability in either of the subsamples.

<sup>2</sup>An analysis of differential nonresponse between the first and thirteenth year of the Panel Study showed remarkably low associations between nonresponse and a host of demographic characteristics such as income level, race, location, etc. (Survey Research Center, 1982).

<sup>3</sup>A procedure for testing the validity of this assumption is described in footnote 7.

<sup>4</sup>Suppose that  $1/x$  is the known selection probability of the sample spouse and  $1/y$  is the unknown selection probability of the nonsample spouse. (Their respective individual sample weights are  $x$  and zero.) The family selection probability ( $f$ ) is the sum of the spouses' selection probabilities:

$$f = 1/x + 1/y = y/xy + x/xy = (y+x)/xy$$

If  $x=y$ , then  $f=2x/x^2$  and the new family weight equals  $x/2$ . In the rare case where both spouses are panel members but from two different original sample

Rules for family weights, then, are as follows:

- 1) If the family contains a single adult, then that person's individual probability and weight are proper for the family.
- 2) If the family contains two married adults, both of whom were part of the original sample, then the family weight is the average of the two individual weights.<sup>5</sup>
- 3) If the family contains two married adults, one of whom is a sample member, the other is not, then it is assumed that the selection probability for the non-sample spouse equals the selection probability of the sample spouse. The selection probability of the family is twice that of the sample spouse and the family weight is half the individual weight of the sample spouse.<sup>6</sup>

These procedures have important implications for the analyst who wishes to make estimates of population parameters from the sample. The decision to follow all sample individuals as they form new households means that the unweighted proportion of young families in the sample will be larger than the corresponding proportion in the population as a whole. Note that this is not a consequence of the PSID's decision to combine a cross-section sample with a low income subsample. Analysts who restrict their attention to the cross-section part of the sample will have this problem as well. Using the weights in analysis will solve this problem.<sup>7</sup>

households, it might seem that the two selection probabilities should be added. To see that this is not the case, consider a sample of couples in which all exchanged partners. Adding the two probabilities for each family would roughly cut the weights in half, and cut the estimated number of families in the population in half. In fact, the selection probabilities should be averaged.

<sup>5</sup>If the original weights are not adjusted for differential individual nonresponse, then the individual weights of the two sample spouses and their average will be identical. The PSID adjusts the individual weights for differential nonresponse and then recalculates the family weights from the revised individual weights using these rules. For the rare case of two sample spouses from different households marrying, see footnote 4.

<sup>6</sup>Anders Klevmarken has pointed out that these rules do not handle cases where other adults move into the household. Suppose that a sample spouse marries a nonsample spouse with mother-in-law. That three-adult family has three chances of selection and the family weight should be smaller than one-half of the sample member's individual weight. Despite stereotypes to the contrary, these events are quite rare in the population and are ignored in the PSID.

<sup>7</sup>An alternative design strategy would be to give the new two-spouse family a weight equal to that of the sample spouse but include these new families in the sample only when the sample member is a female (or only when the sample member is a male). An analyst who cannot use the weights in his analysis for technical reasons but wishes to make proper estimates of simple population parameters can

An Example of How the PSID Weighting Rules Keep the Sample Representative of the Population

Suppose that a population of eight million individuals is evenly divided between high and low income families at time  $t_0$ , with one million families in each income group and with each family consisting of two parents and two children. Further suppose that there is a completely uniform age distribution (200,000 individuals of each age from 0 to 39), produced by the rules that all individuals die on their fortieth birthday, that individuals who choose to marry do so to individuals of the same age, that all departures from the home and marriages occur only on one's twentieth birthday, and that all births also occur on the twentieth birthdays of the parents.

At time  $t_0$ , there will be four million individuals and one million families in each of the income classes. Suppose that high income families are sampled at a rate of 1/1000 and low income families are sampled at a rate of 4/1000. There will be 4,000 high income individuals and 1,000 high income families in the sample, each with a weight of 1,000. (The weight sum for the high income individuals and families is identical to the population totals, as shown on Table 1.) There are 16,000 low income individuals and 4,000 low income families in the sample, each with a weight of 250.

Let us age this population ten years. Of all children leaving home on their twentieth birthdays, suppose that one-quarter of them choose not to marry and thus form single adult households, that one-half of them marry, have two children and remain intact, and that the remaining one-quarter marry, have two children but then divorce and do not remarry in this ten-year interval, with all children in divorcing families going with the mother.

In the population of high income families, one million individuals die between  $t_0$  and  $t_0+10$  because they have aged past their 40th birthdays and one million children leave home because they have aged past their twentieth

mimic this procedure by including families with nonsample adults only when the sample spouse is a female (or male). This procedure can also be used to test for whether the assumption of equal selection probabilities is a reasonable one, since the female- or male-only rule does not involve any assumption about the selection probability of the nonsample spouse.

Note that these considerations are more important in an analysis of simple population parameters such as income inequality than in the estimation of regression models where the possibility that a properly specified model is being estimated reduces the importance of differential sample selection probabilities. Since properly specified models of family income dynamics are not in hand, weighting the regression estimates is recommended. At a minimum, weighted and unweighted estimates can be compared as a test for model misspecification (DuMouchel and Duncan, 1983).

birthdays. There are 750,000 children born to high income families during this time, 500,000 of whom are born to families that remain intact and 250,000 born to couples that end up divorced. The sample of high income individuals parallels these changes. One thousand sample children leave home during this period. Five hundred of these splitoffs marry nonsample spouses and remain living with them. Each of these couples has two children, so the total number of children born to these intact families in the sample is 1000. These children are assigned the weight of the newly formed family, which is one-half of the individual weight of the sample parent. (Recall that the family weight of families formed with a nonsample spouse equals one-half the individual weight of the sample spouse.) An additional 250 splitoffs leave home but neither marry nor have children. The final 250 splitoffs in the sample, evenly divided by sex, leave home, marry, have two children, and then divorce. Of the 500 children born to them, 250 end up with a *mother who is a sample member* and the remaining 250 live with a nonsample mother. These children could be treated in one of three ways. First, one could keep the original individual weight assigned to the child and follow that child even if he or she is living with only a nonsample parent. This is an inefficient alternative, since the family weight of that family will be zero and it would be excluded from family level analysis. Second, one could follow only those 250 children who end up with the sample mothers and double the individual weight assigned to the child at birth when that child loses the nonsample father through divorce. Note that this would involve the possibility of a yearly change in the individual weights of the children depending upon the composition of the adults in the family. Third, one could follow only sample mothers but let adjustments for nonresponse increase the individual weight of the retained children. The PSID follows this third alternative and will have to pay more attention to these kinds of adjustments in the future.

The dynamics of sample composition for low income individuals are identical to those of high income individuals with the exception that there are four times as many of them and they have one-quarter of the weight values of high income individuals.

Note finally that while the total number of individuals in the population declined from 8 million to 7.5 million during these ten years, the number of sample individuals increased from 20,000 to 21,250. This is because splitoffs in the population marry each other but splitoffs in the sample marry someone outside the sample.

The "birth" and "death" of families in the population is also mirrored in the sample. Half of the original families die in both the population and in the sample. In the population, 250,000 high income splitoffs do not marry. In the

sample, 250 high income splitoffs do not marry and form one-person families with family weights equal to their individual weights. In the population, 500,000 high income splitoffs marry and remain married, creating 250,000 new families. In the sample, 500 splitoffs marry, creating 500 new families, each with a sample spouse and a nonsample spouse, and following the weighting rules, with a family weight equal to half of the sample spouse's individual weight. In the population, 125,000 splitoffs of each sex marry and then divorce, creating 250,000 more families with a single adult head by year  $t_0+10$ . In the sample, 250 new families of this type are created.

As with individuals, the net change in the number of families in the sample is larger than the net change in the number of families in the population. As with individuals, the reason is because splitoffs marry one another in the population, but sample splitoffs marry someone outside the sample. In the PSID, this fact increases the number of families by about three percent each year. In spite of cumulative nonresponse of nearly 50 percent since the initial interviewing year, the number of families interviewed has increased from the original 5000 to nearly 7000 by the fourteenth year.
